

Why your window screen looks washed out.

It's all about brightness.

1

Brightness is measured in nits

The higher the number, the better a screen fights daylight.

2

Home TVs are built for living rooms

In a sunny shop window, the picture disappears in the glare.

3

Window screens are built for daylight

Dedicated high-brightness screens stay clear and vivid, all day.

Ask these 3 questions.

1

What is the brightness in nits?

If the seller can't tell you, that tells you something.

2

Is it rated for all-day commercial use?

Windows run long hours. Home TVs aren't built for that.

3

How long is the commercial warranty?

Commercial screens come with commercial cover.

Not sure what your window needs?

We specify the screen for the location, not the other way round.
